3	Procedure	3

1 Overview

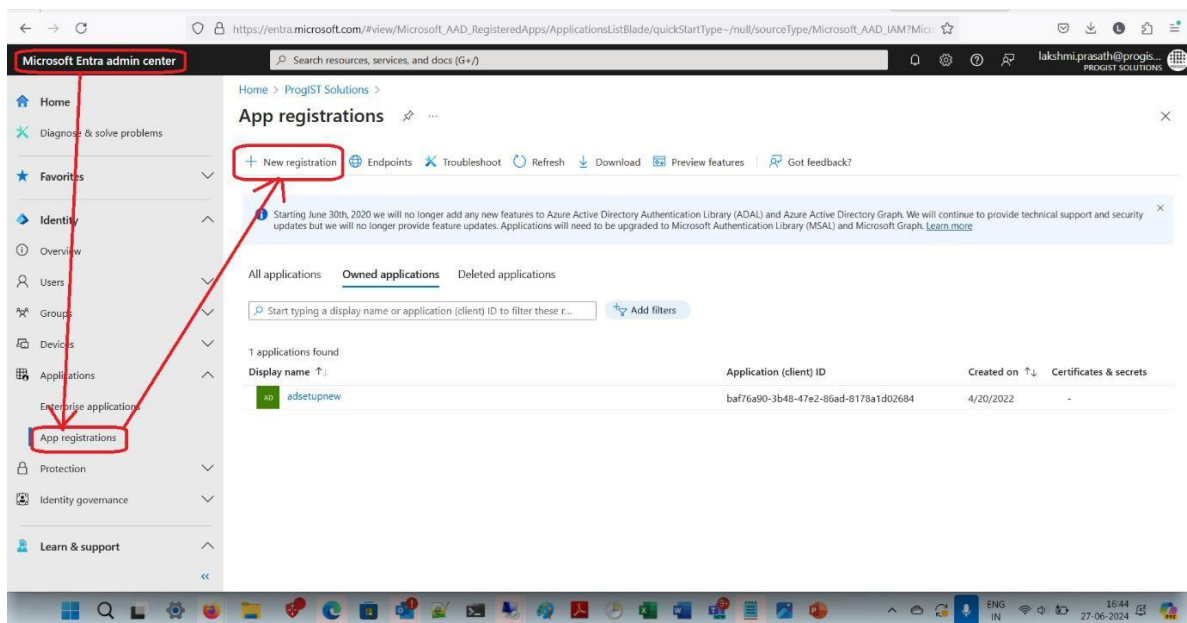

This document contains the procedure to be followed by the Azure AD administrator to synchronise the Azure AD user to the prophish applicaiton.

2 Requirement

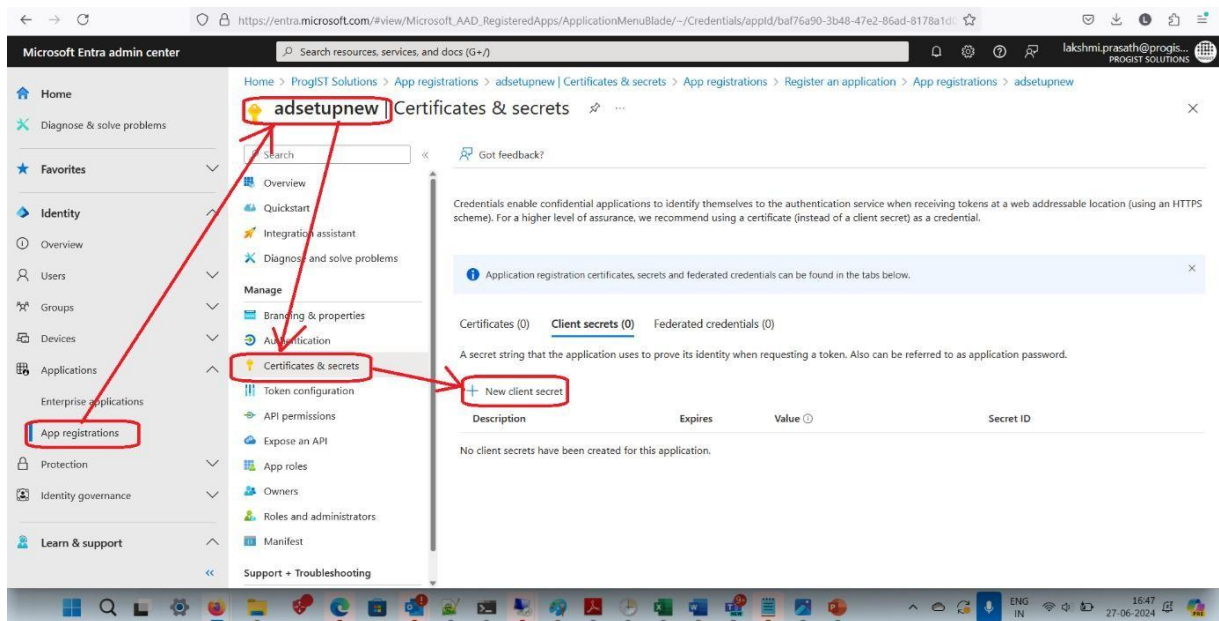

- Azure AD / Entra administrator access

3 Procedure

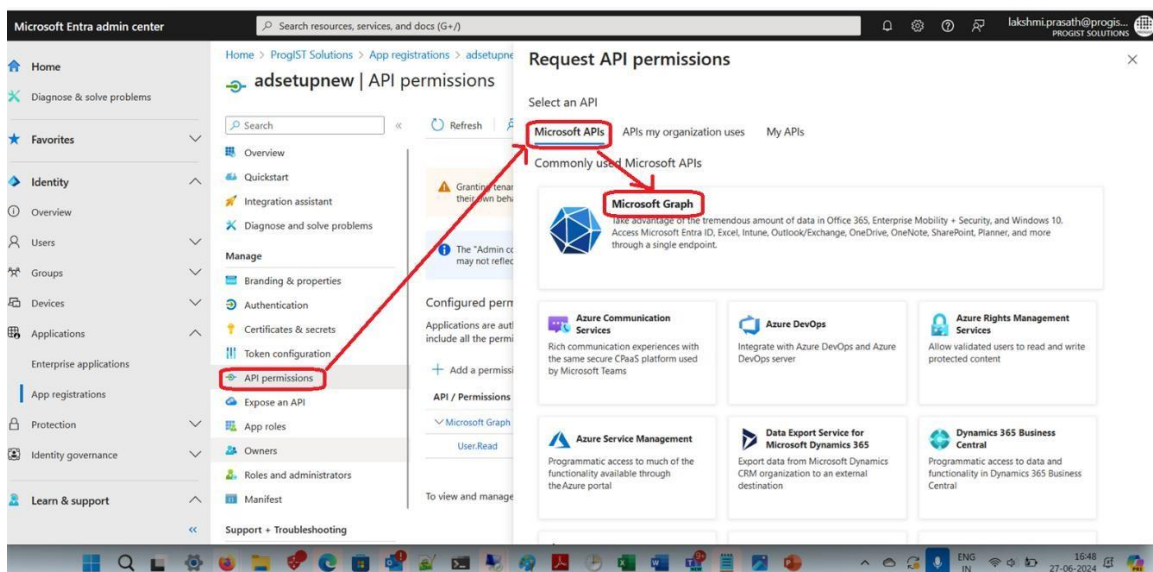

- Login to Microsoft Entra admin centre and register new app with the relevant name.

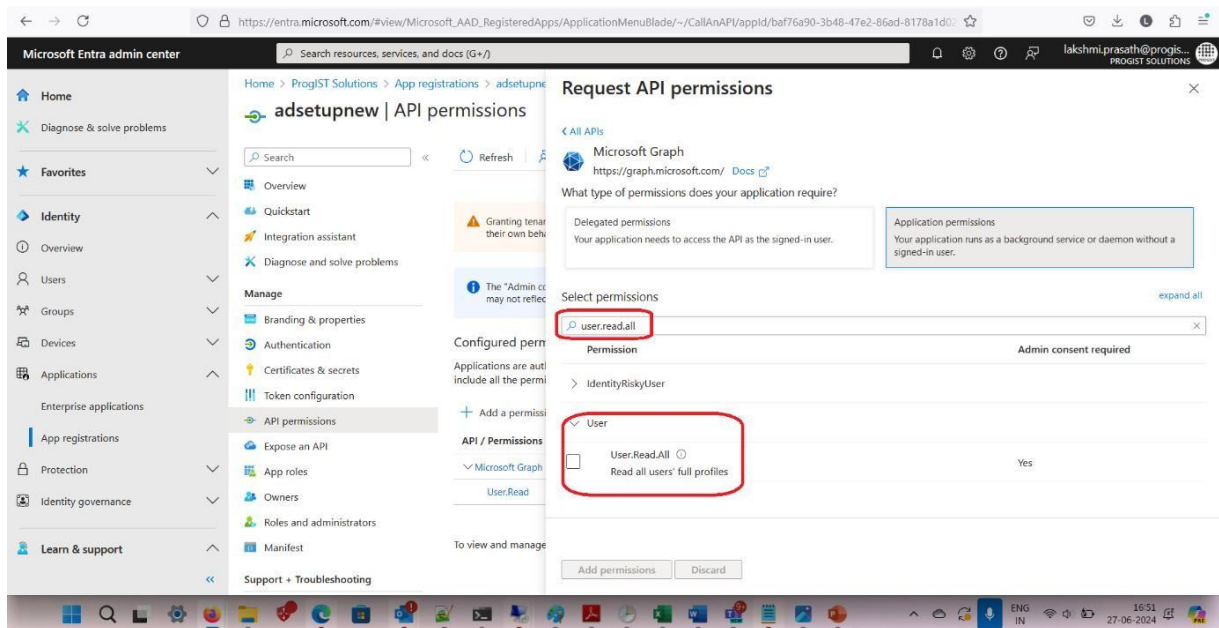

- Click on Certificates & secret create a new client secret

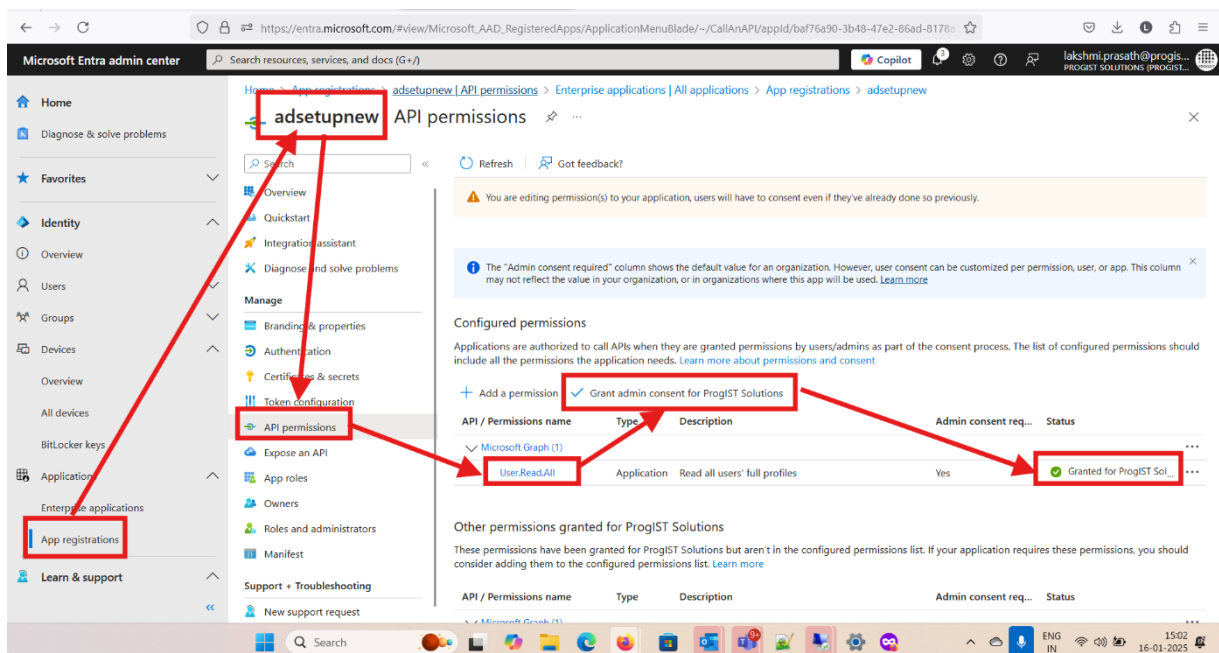

- Select API permissions and select Microsoft graph

- Select the Application permission option and set the permission as “user.read.all”

We may read the user from your Active Directory

Also, note API/Permission name, type, and other details indicated must be the same

- Provide the below details to Prophish team for application-side configurations
 - Tenant ID
 - Application ID
 - Secret ID
 - Secret value
